PROFESSIONAL SUMMARY

Third-year Artificial Intelligence student at Zagazig University with hands-on experience building machine learning and deep learning pipelines on real-world datasets. Skilled in data preprocessing, model training, evaluation, and reproducible notebook workflows. Seeking internship and freelance opportunities in data analysis and machine learning to deliver measurable, practical results.

EDUCATION

Zagazig University - Faculty of Computers and Information

B.Sc. in Computers and Information, Artificial Intelligence Department

Third Year | Expected Graduation: 2027

PROJECTS

Breast Cancer Classification - Machine Learning

<https://github.com/Ahmed3li99/breast-cancer-classification-ml>

- Classified tumors as malignant or benign using the Breast Cancer Wisconsin dataset (569 samples, 30 features) from scikit-learn.
- Trained and compared Decision Tree and Logistic Regression with a full evaluation pipeline: confusion matrix, classification report, ROC curve, and AUC score.
- Results: Logistic Regression achieved 95.61% accuracy and ROC-AUC of 0.9950, outperforming Decision Tree (91.23% accuracy, AUC 0.9206).
- Delivered a fully reproducible notebook workflow covering preprocessing, feature selection, training, and evaluation.

Deep Learning Model Comparisons - RNN, LSTM, GRU

<https://github.com/Ahmed3li99/DL-Model-Comparisons>

- Built and benchmarked three sequence architectures (RNN, LSTM, GRU) on time-series and NLP tasks to compare performance and training behavior.
- Documented how LSTM and GRU handle long-term dependencies more effectively than vanilla RNNs, supported by visualized training curves and evaluation metrics.
- Structured notebooks for clarity and reproducibility using TensorFlow, Keras, NumPy, Pandas, and Matplotlib.

Applied Deep Learning with TensorFlow - CNN, RNN, LSTM, GRU

<https://github.com/Ahmed3li99/Applied-Deep-Learning-TensorFlow>

- Developed hands-on notebooks applying CNNs for image classification and RNN, LSTM, GRU for sequence modeling tasks including sentiment analysis and text prediction.
- Compared how each architecture handles different data types with clear visualizations of training results.
- Focused on core deep learning workflows: model design, training, evaluation, and iterative experimentation using TensorFlow and Keras.

SKILLS

Proficient: Python, Pandas, NumPy, Matplotlib, Seaborn, scikit-learn, TensorFlow, Keras, Jupyter Notebook, Data Cleaning and Preprocessing, Model Evaluation (Confusion Matrix, ROC/AUC)

Familiar: SQL (SELECT, JOIN, GROUP BY), Git, GitHub, Data Visualization

COURSES AND TRAINING

- AI and Machine Learning - Route Academy

LANGUAGES

- Arabic (Native)
- English (Good working proficiency)
